Muscle Aging, Inclusion-Body Myositis and Myopathies

Muscle Aging, Inclusion-Body Myositis and Myopathies

Muscle weakness with ageing is almost inevitable, generally beginning to manifest beyond the age of 40, and is usually unstoppable. It can lead to reduced mobility, increased risk of falling, injury, and even death. But “you’re just getting old” is not a sufficient diagnosis. Specific causes of neuromuscular symptoms may explain progressive muscle weakness, and should be investigated for potential treatment.

Muscle Ageing, Inclusion-Body Myositis and Myopathies explores the clinical and pathological expression of muscle weakness in aging persons. Case studies demonstrate how physicians can more accurately diagnose weakening elderly patients and make better management decisions.

It also explores sporadic inclusion-body myositis and hereditary inclusion-body myopathies. The former, the most common progressive muscle disease in the over 50s, is frequently under-diagnosed and, with the increasing population of aged individuals, is presenting a greater challenge. This disease of muscle has pathological similarities with the well-known Alzheimer and Parkinson brain diseases.

Edited and written by a leading international cast of authors, *Muscle Ageing, Inclusion-Body Myositis and Myopathies* provides a state-of-the-art guide to ageing-associated neuromuscular disorders. It should be in the hands of all those involved in the care of aging and muscle-weakened patients.
