Case For Moon: New Positive Future For Humans In Space - Open Ended With Planetary Protection at its Heart Robert Walker

Are you keen on humans in space, but skeptical about Mars as our first objective for human space exploration or for colonization? Do you think we will start with settlements supported from Earth, such as we already have in inhospitable places such as Antarctica? Do you think our exploration should be open ended with science as a core objective, and planetary protection and reversible biological exploration as core principles?

Do you see the Moon as an exciting first place to visit and explore, and see robots as our mobile sense organs in the solar system? Do you think that it's not yet the time to relax planetary protection guidelines, and that there is nothing special about microbes on human spacecraft that would make Mars less vulnerable to them? Then this may be a vision for you.

The Moon is interesting in its own right. To ignore the Moon is like ignoring Antarctica because someone landed there in the nineteenth century, saying that Antarctica is already "done". It's the closest place to us in space which we can explore on the ground, and also the easiest, and safest to explore. If we can't explore our Moon, we have no chance of exploring Mars.

Also - why rush humans as quickly as possible to the place in the inner solar system most vulnerable to Earth microbes? We want to find native Mars life there, if it exists. It is easy to find life if you bring it with you yourself, but that would be the worst possible anticlimax of our search for life in the solar system. Especially if we found that there was some vulnerable form of early life on Mars, say, RNA based life which on Earth got made extinct by DNA life, until just before the humans got there. We must make sure this can't happen.

The Moon is also resource rich. It has some resources that Mars doesn't have indeed. It is also a safer place to explore, closer to Earth, and more likely to have economic value for Earth.

We can start with small robotic missions first, followed by Antarctic base type settlements on the peaks of eternal light at the lunar poles

Then as we do so, we continue robotic exploration of the solar system, and find out what humans do best, and what robots do best, starting off with humans on the Moon. Then continue outwards in an open fashion, building on what we've learnt.

Later on we can explore Mars from orbit and its two moons, Phobos and Deimos. Meanwhile continue to explore Mars robotically, and also later, telerobotic exploration from orbit. We can also send human explorers to the Venus clouds, and eventually to the asteroids, to Mercury and to Jupiter's moon Callisto.

In this approach, science and planetary protection is central. Space settlement happens because you are there for a purpose. And as with the Antarctic bases - once we are there doing good science, with science as the motivation, then it would be an on going permanent first step into space.

Missions motivated by science continue to grow, and engage the public. No suggestion that we should stop exploring Antarctica because of the cost of the science exploration there. What's more, they can also have overwhelmingly positive outcomes too, especially if we make new discoveries about biology and evolution.

From reader reviews:

Norman Brown:

What do you in relation to book? It is not important together with you? Or just adding material when you want something to explain what your own problem? How about your free time? Or are you busy man? If you don't have spare time to accomplish others business, it is make you feel bored faster. And you have free time? What did you do? Every individual has many questions above. They need to answer that question because just their can do in which. It said that about reserve. Book is familiar on every person. Yes, it is proper. Because start from on pre-school until university need this particular Case For Moon: New Positive Future For Humans In Space - Open Ended With Planetary Protection at its Heart to read.

Maria Antoine:

Reading can called mind hangout, why? Because when you find yourself reading a book specifically book entitled Case For Moon: New Positive Future For Humans In Space - Open Ended With Planetary Protection at its Heart your brain will drift away trough every dimension, wandering in each aspect that maybe unknown for but surely will end up your mind friends. Imaging just about every word written in a e-book then become one contact form conclusion and explanation that maybe you never get before. The Case For Moon: New Positive Future For Humans In Space - Open Ended With Planetary Protection at its Heart giving you one more experience more than blown away your head but also giving you useful data for your better life in this particular era. So now let us show you the relaxing pattern at this point is your body and mind will probably be pleased when you are finished reading through it, like winning a game. Do you want to try this extraordinary wasting spare time activity?

Cliff Boyd:

This Case For Moon: New Positive Future For Humans In Space - Open Ended With Planetary Protection at its Heart is great reserve for you because the content which can be full of information for you who all always deal with world and possess to make decision every minute. This book reveal it facts accurately using great arrange word or we can claim no rambling sentences inside. So if you are read the item hurriedly you can have whole facts in it. Doesn't mean it only provides you with straight forward sentences but difficult core information with wonderful delivering sentences. Having Case For Moon: New Positive Future For Humans In Space - Open Ended With Planetary Protection at its Heart in your hand like having the world in your arm, facts in it is not ridiculous one. We can say that no reserve that offer you world inside ten or fifteen tiny right but this book already do that. So , this is certainly good reading book. Hello Mr. and Mrs. busy do you still doubt that?

Elsie Hawkins:

As we know that book is very important thing to add our information for everything. By a book we can know everything we really wish for. A book is a list of written, printed, illustrated or maybe blank sheet. Every

year seemed to be exactly added. This book Case For Moon: New Positive Future For Humans In Space - Open Ended With Planetary Protection at its Heart was filled concerning science. Spend your extra time to add your knowledge about your scientific research competence. Some people has various feel when they reading a new book. If you know how big selling point of a book, you can truly feel enjoy to read a publication. In the modern era like right now, many ways to get book that you simply wanted.
