Pollution Ecology of Estuarine Invertebrates, as its companion volume ""Pollution Ecology of Freshwater Invertebrates"", aims to present the ecology of estuarine invertebrates and highlight some systematic interpretations. This book also discusses the knowledge about these invertebrates. It is a compilation of existing data at the time of writing, an attempt to introduce ideas and information, and a result of synthesis of systematic interpretations.

This book consists of 12 chapters, each with a specific invertebrate as subject area. The invertebrates encompassed in this book are thread and bristle worms, Bryozoa, ostracods, copepods, crabs, shrimps, larval decapods, Cyathura, isopods (other than Cyathura), amphipods, clams, and snails. Each chapter gives a thorough discussion of the featured invertebrate according to some of the organism's aspects, such as habitat, systematic, zoogeography, pollution ecology, life cycle, physiology, population, taxonomy, and distribution. This book is a valuable source for students, teachers, scientists, or researchers interested in estuarine invertebrates and pollution and study biology, environmental science, zoology, or even marine science.
